## **Eucept**

Ministry of Food and Drug Safety

**APPROVED**

<b>PART A - ADMINISTRATIVE INFORMATION</b>		
<b>Entered by:</b>	<b>Biosimilar Product Information</b>	
MAH	<b>Name of the biosimilar medicinal product</b>	Eucept
MAH	<b>MAH</b>	LG Chem, Ltd. LG Twin Tower. 128, Yeoui-daero, Yeongdeungpo-gu, Seoul, Korea
NRA	<b>Authorisation / Licence number</b>	LG Chem. / 5150, 5151
MAH / NRA	<b>API manufacturing facilities and batch release site for the finished product (if applicable)</b>	Osong Plant LG Chem, Ltd. 151, Osongsaengmyeong 1-ro, Osong-eup, Heungdeok-gu, Cheongju-si, Chungcheongbuk-do, Korea
MAH	<b>Name of the active substance</b>	Etanercept
MAH	<b>Pharmaco-therapeutic group</b>	ATC code: L04AB01. Immuno-suppressants, tumor necrosis factor alpha(TNFα) inhibitors
MAH	<b>Substance category</b>	Fusion protein
MAH	<b>Pharmaceutical form</b>	Solution for injection
MAH	<b>Quantitative composition</b>	25mg/0.5mL, 50 mg/1.0mL solution/pre-filled syringe 50 mg/1.0mL solution/Auto-injector
MAH	<b>Route of administration</b>	Subcutaneous
MAH	<b>Packaging/material</b>	Primary container/glass syringe
MAH	<b>Package size(s)</b>	1 pre-filled syringe/box, 4 pre-filled syringe/box 1 auto-injector/box, 4 auto-injector/box
MAH	<b>Local legal basis</b>	Pharmaceutical Affairs Act article 31 and Enforcement for the drug safety article 4
MAH	<b>Local biosimilar guidelines</b>	Guidelines on the Evaluation of Biosimilar Products (MFDS, 2014)

	Free sulfhydryl content. Molecular weight using mass spectrometry, Oligosaccharide profiling, Sialic acid analysis, N-glycan profiling, O-glycan profiling						
Physicochemical	SDS-PAGE, IEF, SE-HPLC, HI-HPLC, CEX-HPLC, UV spectrometry, Fluorescence spectrometry, Circular Dichroism, FT-IR, Micro DSC, Western blotting						
Biological activity	TNF- $\alpha$ neutralizing activity, TNF- $\alpha$ binding activity, TNF- $\beta$ binding activity, Fc $\gamma$ Receptor binding activity, FcRn binding activity, C1q binding activity, CDC, ADCC						
NRA	<b>Quality data assessment outcome</b>						
	<p>Comprehensive head-to-head comparability studies performed using a number of orthogonal analytical methods demonstrated that all major quality attributes of Eucept were comparable to those of Enbrel<sup>®</sup> with respect to the primary and higher order structures, post-translational modifications, physicochemical and biophysical properties, and biological activities. Comparability was assessed based on the overall originator product range defined using the sufficient batches of Enbrel<sup>®</sup>.</p> <p>Due to the complex heterogeneity in the structure of Etanercept, slight differences were found in the glycosylation profile, charge variants, and Fc-related activity such as Fc receptor binding and antibody-dependent cell-mediated cytotoxicity (ADCC) compared to Enbrel<sup>®</sup>. However, those differences were not considered clinically meaningful since those had no impact on the biological activities related to the primary mechanism of action, as determined by Structure-activity relationship (SAR) studies. In addition, although a slightly lower trend of mannose and sialic acid was observed, this minor difference was not considered to be significant to possess a physiological effect based on the PK equivalence demonstrated in the global clinical study. Overall, based on the totality of evidence with respect to all quality characteristics and global clinical studies, the biosimilarity of Eucept to the Enbrel<sup>®</sup> was concluded.</p>						
MAH	<b>Mechanism of action</b>						
	Etanercept interferes with the soluble TNF- $\alpha$ and down-regulate immune response.						
MAH	<b>Nonclinical data. <i>In vitro</i> studies</b>

Assessment Summary Information for  
Biosimilar IPRP Biosimilars WG**

**<August 2019>**

	Pharmacokinetic study	Cynomolgus monkey										
	13-week repeat dose toxicity including toxicokinetics and anti-drug antibody assessment	Cynomolgus monkey										
NRA	Nonclinical data assessment outcome											
	All comparative <i>in vitro</i> primary PD studies were presented and discussed in the quality section of this report. In <i>in vivo</i> efficacy study and PK study, overall, the PK, PD and general toxicity of LBEC0101 (=Eucept) and Enbrel® are considered similar.											
	<b>CLINICAL STUDIES</b> - include relevant study data from the following (not all may be required) which have been included to demonstrate biosimilarity. Pharmacokinetic, PK Pharmacodynamic, PD Efficacy, Safety, Immunogenicity											
MAH	Clinical data. PK studies											
	Clinical evidence for demonstrating similarity in PK between LBEC0101 and Enbrel® consists of one clinical studies											
	<table><tr><th>Study No.</th><th>Objectives</th><th>Design</th><th>Study Population</th><th>Endpoints</th></tr><tr><td>LG-ECCL003</td><td>To compare the safety and pharmacokinetic properties of LBEC0101 and Enbrel® subcutaneously injected into healthy volunteers</td><td>Randomized, double-blind, single dosing, two-sequence, two-period, cross-over</td><td>Healthy male subjects N = 48 (24 per group)</td><td>1. Safety Endpoints : AEs, ECG, etc. 2. <b>PART C - REVIEWER CONCLUSIONS</b>	
<b>NRA</b>	<b>Conclusions on biosimilarity, approval</b>
<p>The data provided by the Applicant were in line with the local legislation and guidelines.</p> <p><u>Quality</u> All major physicochemical characteristics and biological activities of Eucept were comparable to those of the reference biotherapeutic product Enbrel®</p> <p><u>Nonclinical</u> No major differences in nonclinical data were observed for Eucept compared to the reference biotherapeutic product Enbrel®.</p> <p><u>Clinical Studies</u> The PK and efficacy studies to demonstrate biosimilarity conducted in healthy subjects and Rheumatoid Arthritis patients provided robust evidence there are no clinically meaningful differences versus the reference biotherapeutic product Enbrel®</p> <p>Safety: The ADRs observed with Eucept were similar to the ADRs observed with the reference biotherapeutic product Enbrel®</p> <p>Immunogenicity: In terms of ADA formation, it was observed lower ADA incidence in Eucept group, as compared to the reference biotherapeutic product Enbrel® group during the 52-week study. The ADA formation did not seem to cause a different efficacy and safety profile.</p> <p>Extrapolation of indications: Based on the totality of evidence, all indications requested for Eucept were considered to be approvable.</p> <p><u>Risk Management</u> The risk management plan was considered to be acceptable.</p> <p><u>Overall Conclusion</u> Satisfactory assurance of biosimilarity was demonstrated using an appropriate comparability exercise.</p> <p>The biosimilar product Eucept was considerable approvable.</p>
